Which command can be used to apply the INTERNET ACL to an interface in order for traffic to pass?

A. ipv6 access-class INTERNET {in|out}

B. ipv6 traffic-filter INTERNET {in|out}

C. access-class INTERNET {in|out}

Answer: B

2.Which two commands can be used to show the number of packets dropped by Unicast RPF?(choose two)

A. show ip interface

B. show interface

C. show ip cef

D. show ip traffic

E. show cef interface

Answer: AD

Explanation:

With uRPF properly deployed and configured throughout the network infrastructure, administrators can use the show cef interface type slot/port internal, show ip interface, show cef drop, show ip cef switching statistics feature, and show ip traffic commands to identify the number of packets that uRPF has dropped. Note: Beginning with Cisco IOS Software Release 12.4(20)T, the command show ip cef switching has been replaced by show ip cef switching statistics feature.
