1.You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. There is an answer file for Windows Vista. After you download and update for Windows Vista, the update file is copied to a distribution share by you. You must make sure that when you install Windows Vista on all new computers by using the answer file, the update is installed automatically. You should use as little administrative effort as possible. So what action should you perform to achieve the goal?

A.After the .cab files are extracted from the update file, the .cab files should be copied to the Packages folder in the distribution share. At last you have to update the answer file

B.After install.wim is mounted from the Windows Vista installation media, the update has to be installed on the computer. At last you have to unmount the image and commit the changes.

C.After the update file is copied to the Packages folder in the distribution share, you have to update the answer file.

D.After boot.wim is mounted from the Windows Vista installation media, the update file has to be updated to %systemroot%\system32\softwaredistribution. At last you have to unmount the image and commit the changes.

Answer:A

2.You are an IT professional who work in an international company which is named Wiikigo. You are experienced in deploying and maintaining Windows Vista desktops and Microsoft Office 2007. In the company, your job is to handle issues involving desktop and server image deployments and to provide technical support for the company. There is a single Active Directory domain named wiikigo.com in your company network. There is a Windows Vista computer in your company. Now the company wants an image of the computer to be created and the image file must use as little disk space as possible. Since you are the technical support, the company assigns this task to you. So what action should you perform to accomplish this task?

A.In order to accomplish this task, you should run Imagex.exe and the /split and /append parameters have to be specified.

B.In order to accomplish this task, you should run Oscdimg.exe and the -joliet and iso parameters have to be specified.

C.In order to accomplish this task, you should run Imagex.exe and specify the /compress and /capture parameters have to be specified.
